

# LYNX ULTRA BIND™ SLURRY BINDING AGENT

[www.clearflowgroup.com](http://www.clearflowgroup.com)

## INTRODUCTION

Lynx Ultra Bind™ is a dry granular product that is mixed into slurry material to thicken the material for transport or reuse. Lynx Ultra Bind™ works by binding the solids together and squeezing the water out; this results in a much lower mass and volume than traditional slurry thickening agents.

Primary applications for Lynx Ultra Bind™ are pond demucking and binding Hydrovac waste, but the product and process can be applied to any slurry or mud thickening application.

## BENEFITS:

- Binds wet solids (slurry material)
- Turns slurry into a solid mass
- Reduces water content in bound material
- Removes requirement for expensive hauling (dump truck instead of vacuum trucks)
- Removes requirement for large volume storage of absorbants

DIFFERENT BLENDS FOR DIFFERENT SOURCE MATERIAL

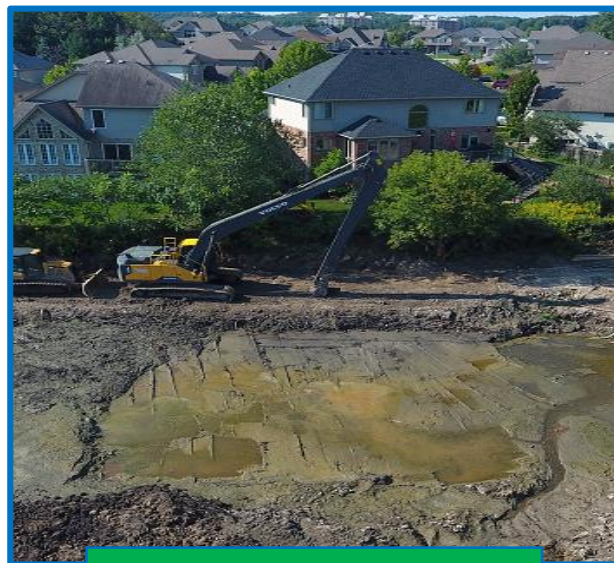

TESTING ON SITE TO VERIFY DOSING RATE

## SPECIFICATIONS:

- Multiple Blends to match different materials
- Typical dosing is 0.25 kg to 2 kg per cubic meter of material to be bound, depends on starting material.
- Binding the material pushes water out of the material reducing weight and volume

## APPLICATIONS:

Small Project: Excavations

Large project: Using Centrifuge
