puregreen Water-Saving Shower Nozzle

The "puregreen" water-saving shower nozzle allows you to save water easily without any compromises. All you need to do is screw it handtight onto the shower fitting or shower head. Thanks to the special technology, the water that flows through is swirled with air and speeded up again. This ensures a water saving of up to 50%* - while retaining 100% of the showering sensation. Valuable resources are saved in the

* Compared to standard shower heads which on average consume approx. 15 l per minute.

START-UP SHOW

THE FOUNDERS: KARSTEN GAEDKE AND ALEXANDER SCHULZE

Alexander had already tried out a number of water-saving shower nozzles, but was not happy about the fact that the pleasant sensation of showering with a full jet of water was often lost as a result. One evening he discussed this issue at length with Karsten, who had spent many years working in the sanitary accessories trade and was also well aware of the problem. Together they considered how they could combine two things: achieving a water saving of up to 50% and retaining the pleasant showering sensation that you are used to from your own shower. This is how the idea of puregreen came about.
