

[Homayoon Sabbaghzadeh Shoushtari](#)

Hi;

Would you please change the subject "Water War"? Why WAR?!!!!!!!!!!!!!!

Please change it to "Water for Peace and Security between Georgia and Florida"-

This is the GOAL of "Sustainable Development in 3rd Millennium" and also the target of "Integrated Water Resources Management" to reach Sustainability to have Peace, Security, Equity and Food Security.

This is now common problem with many countries that have water scarcity to have this time of conflicts between the upstream, downstream and inter-basins of the River Basins. So the first step is to find the Socio-Economic plans to solve the problem between two states in short time.

Then after by implementing the medium and long term Master Programs with "" Progressive Road Map"" you will be successful in Management this conflicts. Also some MCDM ""Multi Criteria Decision Making Models"" can help you to monitoring your effect of the decisions directly and online the feedback of the system.

So hopefully by increasing the knowledge and upgrading the social training of the people in Water Consumption and Demand Management also by define a Regional Project by the name of "" Updating Water Resources Master Plan for both states simultaneously (Georgia and Florida)also the inter-basin effect of Alabama State on two state (if exist) , you can spend more effective on time and budget.

So I had some experience in this type of conflict resolution and if can help, I highly appreciate to cooperate.

Best regards

H.Sabbaghzadeh
