Both Water and Energy are two most important and vital utilities for operation of every industry. Large or Small, local or international, Mills or factory, Refinery or Fertilizer. Every single industry is stand still without absence of any of these utilities. In efficient or over utilization of these utilities mean higher cost of production & existential threat because of non viable production cost. Both these precious resources are essential for economic production cost. Quality of process Water and uninterruptable energy supply depends upon integrated, well connected equipment, transformers and generators, Pumps & Compressors controls & monitoring instruments, valves, switches cables & pipes. With increased focus on environmental conservation & Green Energy & Low Carbon foot prints have introduce new dimension of Waste Water treatment, Recycling and Renewable Energy Generation as important dimension to consider for viable and operation of industries.

A large pool of equipment manufacturers and service providers make this integrated network to design and work. Pak Water & Energy Expo bring together all these manufacturers and Service providers to put on display their products, equipment and display their expertise for better & efficient utilization of Water & Energy. It is a three days event being regularly organized since 2016 at Karachi & Lahore Expo Centers.

The next event is scheduled to be organized at Tulip Marquee Islamabad from September 23 - 24, 2026.
