Manure Dewatering Machine

1200-TYPE

MANURE SEPARATOR

DESIGN · PRODUCTION · SHIPPING

Pig manure contains a large number of microorganisms and drug residues, which are the main substances that pollute soil and water sources. And it also contains parasite eggs. Therefore, pig farms should properly handle the excrement of pig farms.

Generally speaking, the water content of pig manure in pig farms is often higher than 90%, so it is very suitable to use our slope screen t.

This solid-liquid separator can process pig manure into dry manure and manure sewage. This is very helpful for subsequent processing. Here are some ways to deal with it.
