Telemetry Retrofit for Smart Water Networks

We're excited to share a major milestone in our journey toward smarter water management! **Aquameter** is now being field-tested in collaboration with **Mirahtec** on their telemetry platform for water utilities.

Upgrading water networks doesn't have to mean replacing entire systems. Our retrofit solution **transforms mechanical water meters into smart, connected devices**, seamlessly integrating with telemetry platforms like Mirahtec's for **improved billing accuracy, and operational efficiency**, and without the high cost and wasted time of full meter replacements.

Highlight of the AfWASA Conference

Mirahtec showcased Aquameter at the **African Water and Sanitation Association** conference in Uganda, where it won over visitors by demonstrating the ease and efficiency of creating smart water networks by retrofitting legacy infrastructure.

Curious to see how a retrofit is done? Check out the video and see how we're transforming water networks with Aquameter!

Retrofit and Upgrade Your Water Networks Today

Are you looking to modernize your water network without the cost and disruption of full meter replacements? Learn how to do it with this simple, efficient retrofit.
