Nano Nano

Gaia Ultrafine Bubbles Go The Distance

Need 10,000,000 gallons o₂ water/day?

No worries Gaia systems do this every day.

<70nm gas bubbles last days not seconds.

Gaia systems mix and aerate.

Top to bottom - end to end - Gaia nano size UFB bubbles uniformly mix gas bubbles throughout a lake or treatment plant. If you wish to maintain 20 mg/l oxygen throughout your 20 acre basin, no problem, Gaia nano bubbles permeate every inch of solution.

Mixed Gases: Same system dissolves o₂, co₂, No₂ more efficiently than any other product.

Deploys in the toughest environments including the world's largest salt water fish farms.

Low pressure system - under 20 PSI - Mixes and aerates. Flexible deployment.

Best-In-Class Gas Transfer

Passes Solids Up To 25mm

<less than 15 psi

Inline or submersible

Proven Worldwide

Push to connect air
hose

Water flow

Ready to thread onto
pump or nipple
