

Industrial waste management

Chemical Waste

Neutralization, chemical precipitation, incineration, or secure disposal in lined landfills.

Solid Waste

Recycling, composting (if organic), or disposal in engineered landfills.

Hazardous Waste

Special treatment (e.g., stabilization), secure landfills, or high-temperature incineration.

Organic Waste

Composting, anaerobic digestion, or conversion to biogas and biofertilizer.

Thermal Waste

Heat recovery systems, reuse in processes, or safe disposal of slag/ash.

Radioactive Waste

Containment in shielded storage, vitrification (encapsulation in glass), and deep geological disposal.

Laboratory Waste

Autoclaving, incineration, or chemical neutralization depending on the waste type.

Electronic Waste (E-Waste)

Recycling to recover materials, safe disposal of hazardous components.
