

Non-Fire Rated Storage Building

*3 Point door latch
with "L" handle
and pad lockable*

Polystar's Non-Fire Rated storage buildings are ideal for storing caustic chemicals, paint, fertilizers, herbicides, pesticides and additional EPA regulated hazardous materials and chemicals.

The strength and durability of any building starts with a quality foundation. Unlike most competitors who use steel channel for their foundation, at Polystar we manufacture our sump foundation using heavy duty "I" beam construction providing superior strength. Our integrated sump is second to none ensuring that all potential spills are captured.

Our quality design doesn't stop there. While some manufacturers cut cost with a thinner gauge steel, at Polystar, we professionally hand weld the remaining structure using 12 gauge steel. We reinforce the building against outdoor elements with a high performance epoxy polyurethane system, a scientifically advanced product that is chemically bonded prior to application. The interior is coated with a chemically resistant finish ensuring long lasting durability. With a list of optional high quality accessories, we can customize any of our storage buildings to fit your application.

Innovation, quality workmanship, extreme durability and dependability define our storage buildings and are the answer to your hazardous material storage needs.

Superior I-beam construction

Non-Fire Rated Storage Building

Galvanized steel grating over secondary containment sump

Explosion proof lighting

Standard Features

- Leaktight spill containment sump
- High Performance Epoxy/Polyurethane coated exterior for superior protection
- Chemically resistant interior coating
- Static grounding rod
- Floor loading of 600 psf
- Permanent anchoring (siesmic restraints)
- Vents for natural ventilation
- Three point door latch with "L" handle, pad lockable
- Self draining pitched roof
- Forklift accessibility for easy relocation
- Heavy gauge steel for high strength and durability

Optional Features

- Lighting
- Shelving
- Mechanical ventilation
- Sump drain
- Removeable fiberglass or galvanized steel grating
- Variety of door sizes and configurations
- Heavy duty ramps

Popular sizes include:
