

Sustainable Water Savings

We have recently partnered with an investor that specializes in water and energy related infrastructure. They use an innovative Public-Private Partnership (P3) approach which we think may benefit you, in that we could fund and develop your improvements quickly and with no out-of-pocket expense or debt obligations.

Investing in modern infrastructure, whether replacing something old or part of something new. To ensure the assets perform, they are responsible owners by paying for them to be maintained and continuously upgraded to keep them reliable, safe and efficient. They only invest in top-of-the-line assets, designed, installed and serviced by notable experts.

We are able to work together on energy, water, fuel and waste savings projects, such as:

- HVAC Intelligence Controls
- Cooling Towers, Air Handlers, Heat Pumps, Economizers, Smart Thermostats, RTU's,
- LED lighting – ballasts – occupancy sensors – dimming & directional lighting
- Motors: VFD's, ECM, Pumps, Induction
- Power Conditioning & Storage
- Clean Transportation – garbage trucks, charging stations
- Solar Water Heaters
- Double Pane Glass
- Advanced Wall / Ceiling Insulation
- High Efficiency boilers, furnaces & water heaters
- Irrigation Hardware
- Irrigation Controls

This is a simple month-to-month Service Agreement with guaranteed savings that can be terminated at any time without penalties; it is NOT any of the following:

- ESCO Contract
- Ordinary Shared Savings Agreement
- Loan or Lease
- Financing Agreement

Contact us at 1-877-697-6915 if you are currently working on or considering any major infrastructure project.
