Title:

**MAGNETIC WATER TREATMENT WITH TORSIONAL MAGNETIC FIELD
BY IRREGULAR CHANGES**

Abstract:

This invention is a product called Magnetic Desalination and Water Treatment with Torsional Magnetic field by Irregular Changes consists of a coil winding, torsional magnetic or electromagnetic and a magnetic field that can create a variable magnetic or electromagnetic field that can disturb the order and direction created by the magnetic or electromagnetic field and the rapid and intense change in the field that the existing order and direction with speed And shake it vigorously until the parts of the thesis are separated.

In this invention, first a magnetic field is created for magnetic water treatment, then this field is greatly changed by a twisting electromagnetic field, as a result of which some cations fall, which are separated from the water by a filter. and is directed outside. Then a normal field change is made in the system twice.
