COMPANY PROFILE

The activity of ECOPLUS is based on solid foundation of 40 years' experience in the treatment of various effluent, combined with a constant passion for our job and the professionalism of our team.

Our core activity of engineering, manufacture and supply of effluent treatment plants has been developed and applied to numerous industrial sectors, including civil waste and water potabilization plants.

Combining ECOPLUS' experience and a continual process of utilising technological advancements has enabled us to realize treatment plants using either partial or entirely PURIFIED WATER.

APPLICATION FOR LEATHER INDUSTRY

Continued research and engineering has resulted in the successful application of our equipment in the leather industry.

ECOPLUS has a thorough understanding of the tannery environment, where we strive to offer the best solution from both a technical and an economic perspective.

The last innovations include technological application for the recovery of Lime and Chrome.

Our engineering and mechanical facility specialises in the handling of stainless steel and produces a range of equipment, namely:

1. **CHANSAFE** Self-Cleaning Channel Screen
2. **IDROFILTER** Rotating Discs Filters for Filtration from 100 to 1500 micron
3. **SCRUBBER** for H₂S treatment
4. **LIMING RECYCLING** plants
5. **CHROME RECOVERY** plants
