

ԶԵՈՖԻԼՏԻՐ™ ZEOFILTER™

Description

ZeoFilter is made of natural zeolite mineral which may be found in areas with volcanic sedimentation activity. *ZeoFilter's* industrial uses are conditioned by its unique molecular and catalytic characteristics, crystallo-chemical characteristics, the ion exchange capacity, the ability to absorb water and other molecules while maintaining its original structure. It helps to maintain the biological balance in artificial ponds.

Application

ZeoFilter is widely used in water utility systems. It is capable of absorbing molecules of SO_2 , H_2S , C_2H_6 , CH_3OH , CO_2 , CH_3NH_2 , CH_3CL , H_2O , CH_3B_2 , NH_3 , N_2 from the water. In order to clean 1m^3 of water 1 kg of Natural crushed zeolite may be used.

Form

ZeoFilter comes in 5 or 10 kg bags.

Results

Thanks to its composition *ZeoFilter* acts as an ion exchanger, thus regulating the balance of components in water. *ZeoFilter* removes a number of toxic materials from water, e.g. ammonium, nitrates and heavy metals.
