

Bio-Clean Engineering LLC (BCE) is your premier provider of biologically based cleaning products for industrial and water facilities. BCE is founded on the principal that your neighbors and co-workers deserve protection from environmental upsets and potential exposure to toxic gases.

MISSION

This company's mission is to ensure that your liability as an organization is mitigated up front where possible. If a cleanup is necessary, BCE will ensure that you have the proper tools to combat the upset immediately.

VISION

BCE's vision is clear.

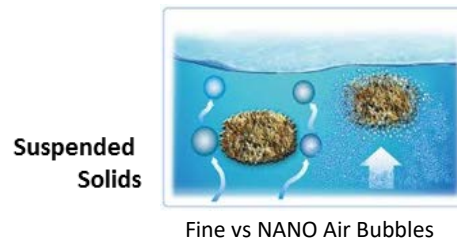

Sao Paulo Brazil, Accell Clean used to treat water

GOALS

The company's products will be provided to our customers in a manner that ensures these organizations are able to carry out their mission. When remediation is necessary, BCE's products will ensure that it is completed in a proficient manner.

PRODUCTS BCE products are microbiological based. The first is a family of surfactant products and specialty items that are designed to clean water, equipment, and soil contamination. Accell Clean tackles wastewater issues including Fats, Oil & Grease (FOG), solids reductions and hydrogen sulfide. While Accell SWA (surface washing agent) targets oil spills in the water or on the land.

The second product line utilizes the Oxidation principal. BCE represents the Nano Air Bubble Aeration System or NABAS; NABAS provides air, oxygen or hydroxyl radicals to clean ponds, membranes and wastewater. This system inundates the treatment facility with micron size bubbles (80% of the bubbles are 5 microns in size or smaller). These bubbles lift solids to the surface most efficiently while providing the oxygen for aerobic bacteria to oxidize any organic materials.
